

EXCELERATE CONNECT

Week 1 App Proposal, Wireframes and Setup Evidence

Mobile App Development with Flutter Virtual Internship

Prepared by Francis Kwarteng

17 July 2026

PROJECT STATUS

Week 1 planning and environment setup complete

The proposed application screens and features have not yet been implemented.

Repository: github.com/franciskwarteng677/excelerate-connect

Submission Overview

This document combines the complete Week 1 deliverable into one submission file. It records the proposed application, user needs, planned features, user journeys, low-fidelity wireframes, navigation flow, Flutter environment verification, and GitHub repository evidence.

Week 1 completion statement

Flutter and Dart were configured, the default Flutter sample application ran successfully in Chrome, the application requirements were studied, the proposal was prepared, the low-fidelity wireframes were completed, and the project was committed and published to GitHub.

Deliverable Components

1. App proposal	Purpose, problem statement, target users, planned features, requirements, scope, technology direction and success criteria.
2. User journeys	Learner and administrator journeys showing how the proposed system is expected to be used.
3. Low-fidelity wireframes	Six grayscale mobile planning screens: Login, Home, Program Listing, Program Details, Feedback Form and Profile.
4. Navigation flow	A diagram connecting the planned screens and return paths.
5. Development evidence	Screenshots confirming that the Flutter sample app ran and that the GitHub repository was published.

Important Scope Note

The custom Excelerate Connect interface is not yet implemented. The current Flutter build remains the default sample application and is used only to confirm that the development environment works correctly. All application screens shown in this PDF are planning artifacts for later implementation.

Application Proposal

Executive Summary

Excelerate Connect is a proposed Flutter mobile application designed to provide Excelerate learners with a central place to discover programs and events, review program details and announcements, track learning progress, manage learner profiles, and submit feedback. The application is also planned to provide administrators with tools for managing programs, announcements, learner participation and feedback during later development stages.

This Week 1 proposal defines the application purpose, users, planned functionality, requirements, navigation, scope and success criteria. Development is currently in the planning and environment-setup stage. No custom screens, backend services or administrator tools have been implemented.

Problem Statement

Learners may need to consult different sources to find available opportunities, follow announcements, understand program details and track learning activities. This can make relevant information harder to find and reduce clarity in the learner experience. Feedback and profile-related tasks also benefit from a consistent, accessible process.

Administrators need a structured way to maintain program information, communicate announcements, review learner participation and consider submitted feedback. Excelerate Connect is planned to bring these activities into one coherent mobile experience while keeping learner and administrator responsibilities distinct.

Purpose of the Application

The purpose of Excelerate Connect is to plan and develop a user-friendly Flutter application that will make Excelerate learning information and common learner activities easier to access. The planned application will support learners from discovering a program to reviewing details, monitoring progress and sharing feedback. In later phases, administrator capabilities will support the management of relevant content and participation records.

Project Objectives

1. Design a clear mobile experience for discovering programs, events and announcements.
2. Provide access to useful program details from a consistent interface.
3. Enable learners to maintain profiles and review learning progress.
4. Offer a straightforward process for submitting feedback.
5. Plan notifications that help learners remain aware of relevant updates.
6. Define future administrator workflows for program, announcement, participation and feedback management.
7. Build the application with a maintainable Flutter and Dart structure in later implementation stages.
8. Apply usability, accessibility, responsiveness, performance and security considerations throughout development.

Target Users and Planned Features

Learners

Excelerate participants who will use the proposed application to:

- Sign in and manage learner profiles.
- Discover available programs and review program details.
- View events and announcements.
- Track learning progress.
- Receive relevant notifications when notification functionality is developed.
- Submit feedback about their learning experience.

Administrators

Authorized users who, in later development stages, will use planned management capabilities to:

- Create, update and organize program information.
- Manage events and announcements.
- Review and manage learner participation information.
- Review submitted learner feedback.

Administrator scope

Administrator functionality is part of the broader product scope and is not a Week 1 implementation deliverable.

Planned Core Features

Login and learner profile	Authentication entry point and profile experience for learner information.
Home dashboard	Overview providing convenient access to major sections and relevant updates.
Program listing	Browsable presentation of available Excelerate programs.
Program details	Detailed view of a selected program and its relevant information.
Events and announcements	Area for upcoming events and important communications.
Feedback form	Structured method for learners to submit feedback.
Learning progress tracking	View of learner participation and progress information.
Notifications	Alerts for relevant program, event, announcement or progress updates.
Administrator management	Future tools for programs, announcements, participation and feedback.

Requirements

Functional Requirements - Learner

- Allow a learner to access a login flow and manage profile information.
- Present a home dashboard with navigation to primary learner functions.
- Display a listing of programs and details for a selected program.
- Provide access to events and announcements.
- Provide a feedback form.
- Present learning progress information in an understandable format.
- Present relevant notifications after notification functionality is designed and implemented.

Functional Requirements - Administrator

- Provide authorized administrators with tools to add, update and organize program information.
- Allow authorized administrators to manage events and announcements.
- Allow authorized administrators to review or manage learner participation information.
- Allow authorized administrators to review submitted feedback.
- Separate administrative actions from learner functions through appropriate authorization.

The exact data behavior and persistence approach depend on later design decisions. No backend or database has been selected at this stage.

Non-Functional Requirements

Usability: Clear and consistent navigation, understandable labels and a reasonable number of steps for common tasks.

Accessibility: Readable text, sufficient contrast, meaningful control labels, suitable touch targets and support for assistive technologies where possible.

Responsiveness: Layouts that adapt to target screen sizes without avoidable clipping or overlap.

Performance: Prompt screen response, efficient lists and visual content, and minimized unnecessary processing.

Security: Restricted administrator access, protected sensitive information, validated input and refined authentication requirements if a backend is added.

Maintainability: Consistent Dart conventions, reusable components, accurate documentation and version control throughout development.

User Journeys and Planned Navigation

Learner User Journey

9. The learner opens the proposed application and reaches the login experience.
10. After successful login, the learner arrives at the home dashboard.
11. The learner opens the program listing to discover available opportunities.
12. The learner selects a program and reviews its details.
13. The learner may access the feedback form after reviewing or participating in a program.
14. From the home dashboard, the learner may also view events, announcements and the profile area.
15. As later functionality is developed, the learner may review progress and receive notifications.

Administrator User Journey

16. An authorized administrator accesses the planned administrator experience.
17. The administrator reviews existing program information and participation records.
18. The administrator creates or updates program information when management functions are implemented.
19. The administrator manages events and announcements.
20. The administrator reviews learner participation information and submitted feedback.
21. The administrator completes the task and exits the management experience securely.

Both journeys describe the intended experience and are not currently implemented.

Planned Navigation Flow

- Login -> Home -> Program Listing -> Program Details -> Feedback Form
- Home -> Events and Announcements
- Home -> Profile
- Program Details -> Program Listing
- Profile -> Home

Navigation Flow Diagram

The diagram below records the proposed relationships among the main learner screens and supporting destinations. Arrows represent planned navigation routes rather than implemented interactions.

Figure 1. Excelerate Connect planned navigation flow.

Interpretation

The main path moves from Login to Home, Program Listing, Program Details and Feedback. Home also connects to Events and Announcements and Profile. Return paths are included to keep navigation clear and predictable.

Low-Fidelity Wireframes - Entry and Dashboard

These grayscale wireframes define structure, content hierarchy and principal controls. They are planning designs, not implemented screens or final visual designs.

1. Login

A simple learner entry point with email and password fields, password recovery, login and account-creation actions.

2. Home Dashboard

A learner overview with greeting, search, featured programs, upcoming events, a recent announcement and bottom navigation.

Low-Fidelity Wireframes - Program Discovery

3. Program Listing

Search and filter controls support browsing. Program cards show image placeholders, categories, deadlines and detail actions.

4. Program Details

A focused information screen with program image, title, category, deadline, description, eligibility, registration and feedback actions.

Low-Fidelity Wireframes - Feedback and Profile

5. Feedback Form

The Feedback Form wireframe is a vertical mobile app screen. At the top, it has a status bar with the time 9:41 and a back arrow icon. Below the back arrow is a title bar with the text "Give Feedback". The main content area starts with a section titled "PROGRAM NAME" containing a placeholder for a selected program. This is followed by a "Your Rating" section with a five-point star rating system. Below the rating is a "Feedback" section with a text input field for sharing experience. An optional "Suggestion" section follows with another text input field. At the bottom of the form is a large "Submit Feedback" button. The footer of the screen contains the text "LOW-FIDELITY PLANNING WIREFRAME".

6. Learner Profile

The Learner Profile wireframe is a vertical mobile app screen. At the top, it has a status bar with the time 9:41. Below is a title bar with the text "Profile". The main content area starts with a learner's identity section, including a profile picture placeholder, the learner's name, email address, and an "Edit Profile" button. This is followed by a "Learning Progress" section with an overall progress summary bar and two buttons for "IN PROGRESS" and "COMPLETED" programs. Below this are two more buttons for "Saved Programs" and "Settings", each with a right arrow. A "Logout" button is positioned below these. The footer of the screen features a persistent bottom navigation bar with four icons: Home, Programs, Progress, and Profile, with the Profile icon being the active one.

A selected program, five-point rating, feedback area, optional suggestion field and submit action.

Learner identity, edit action, progress summary, saved programs, settings, logout and persistent bottom navigation.

Flutter Environment and First App Evidence

Flutter SDK and Dart were configured in Visual Studio Code. The initial Flutter project was created and the default sample application was successfully launched in Google Chrome. This verified that the development environment could compile and run a Flutter web application.

Figure 2. Default Flutter counter application running successfully in Chrome.

Evidence statement

This screenshot confirms environment setup only. The displayed counter app is Flutter's default sample and is not the proposed Excelsite Connect interface.

Configured Components

- Flutter SDK
- Dart SDK included with Flutter
- Visual Studio Code with Flutter and Dart extensions
- Google Chrome as the initial test device
- Git for version control

GitHub Repository Evidence

The project was initialized with Git, committed locally and published as a public GitHub repository. The repository contains the Flutter project scaffold, README, application proposal, wireframe documentation, six SVG wireframes and the navigation-flow diagram.

Figure 3. Public GitHub repository with the Week 1 commit and project files.

Repository link: <https://github.com/franciskwarteng677/excelerate-connect>

Version-Control Evidence

- Repository branch: main
- Initial commit message: Initialize Flutter project and add Week 1 documentation
- Public repository access enabled
- Generated build folders and local configuration files excluded through .gitignore

Scope, Success Criteria and Current Progress

Week 1 Scope Completed

- Configured and validated the Flutter and Dart development environment.
- Created the initial Flutter project.
- Studied and documented application requirements.
- Prepared the application proposal.
- Planned the navigation and created six low-fidelity wireframes.
- Initialized version control and published the repository to GitHub.

Work Outside the Week 1 Scope

- Custom application screens and final user-interface components.
- Login and authentication behavior.
- Learner profile, dashboard, program, event, feedback, progress and notification functionality.
- Administrator management functions.
- Backend, database, API or external-service integration.
- Production deployment or application-store release.

Planned Technology Stack

- Flutter - cross-platform user-interface framework.
- Dart - application programming language.
- Git - version-control system.
- GitHub - repository hosting and collaboration platform.

No database or backend technology has been selected. Any backend will be evaluated later based on confirmed functional, security and data requirements.

Success Criteria

- Clear navigation across the learner experiences completed within the internship scope.
- Implemented screens that accurately reflect approved requirements and wireframes.
- Usable and readable layouts across tested screen sizes.
- Appropriate consideration of accessibility, performance, security and maintainability.
- Documentation that accurately distinguishes completed work from planned or deferred functionality.
- A final submission that meets the internship deliverable requirements.

Conclusion

Excelerate Connect is planned as a focused mobile experience that will bring important learner activities and information into a clear, consistent application. Week 1 established the problem, purpose, intended users, planned features, requirements, navigation, technology direction and delivery boundaries needed to guide later development. The environment, proposal, wireframes and GitHub repository are complete and ready for the next phase.

Final Week 1 status

Proposal complete | Wireframes complete | Navigation flow complete | Flutter sample app verified | GitHub repository published
