

WEEK 2 DELIVERABLE

Excelebrate Connect

Working UI Prototype

A responsive Flutter front-end prototype for learner program discovery, navigation, and program-detail exploration.

Student	Francis Kwarteng
Internship	Mobile App Development with Flutter Virtual Internship
Deliverable	Week 2 Working UI Prototype
Project	Excelebrate Connect
Repository	github.com/franciskwarteng677/excelebrate-connect
Date	18 July 2026

Program Details

Dynamic local sample content

Week 2 Deliverable Overview

The Week 2 objective was to move Excelerate Connect from planning and wireframing into a working Flutter user-interface prototype. The default Flutter counter app was replaced with a responsive, themed learner experience built with local sample data.

Requirement	Status	Evidence in this submission
Functional Login Screen	Completed	Validated email and password inputs; local prototype navigation
Functional Home Screen	Completed	Featured programs, events, announcement, quick links, bottom navigation
Program Listing Screen	Completed	Local programme cards, search, category filters, reset control
Program Details Screen	Completed	Dynamic local content, metadata, description, eligibility and prototype actions
Navigation between screens	Completed	Login to Home, Home to Programs, Programs to Details, back navigation
GitHub repository update	Final step	Commit and push Week 2 code, screenshots and documentation before submission
Demo walkthrough video	Optional	Not included in this PDF

Technology Flutter and Dart Responsive web testing in Chrome	Data approach Local illustrative data only No API or database connection	Design system Consistent blue/teal theme Reusable navigation and UI patterns
---	---	---

Implementation, Navigation and Validation

Implemented functionality	Navigation flow	Testing evidence
• Responsive Login, Home, Programs and Program Details screens. • Email-format and required-password validation on the Login screen. • Password visibility toggle and clear inline error feedback. • Program search, category filtering and reset controls. • Program cards open a corresponding details screen using local data.	• Login leads to the Home dashboard after valid local input. • Home navigation opens Programs, Progress and Profile placeholders. • Program cards and View Details controls open Program Details. • Back navigation returns to the previous screen while preserving context. • Consistent bottom navigation is used across primary learner screens.	• Manual Chrome testing covered login validation and valid navigation. • Responsive layouts were reviewed at wide and narrower browser widths. • Search, filters, reset, details and back navigation were exercised. • Project tooling reported successful formatting, analysis, tests and web build. • All screenshots in this document were captured from the running prototype.

Current prototype limitations

• No real authentication, backend, API, database or persistent user data.	• Programs, dates, events and announcements are local sample content.
• Application, registration and feedback buttons show prototype messages only.	• Progress, Profile, notifications and administrative tools remain later-stage features.

1. Login Screen

Figure 1. Login screen displayed in Chrome with valid local prototype credentials entered.

• Responsive centered authentication card with project branding.	• Email and password fields support validation and password visibility control.
• Valid local input navigates to the Home screen; no real authentication is used.	• Prototype limitations are stated clearly below the action area.

2. Home Screen - Top Section

WORKING UI

Figure 2. Home dashboard showing the welcome banner, search control and featured programs.

• Responsive learner greeting and notification control.	• Prominent welcome banner introduces the local prototype experience.
• Featured programme cards provide direct access to programme details.	• Persistent bottom navigation exposes Home, Programs, Progress and Profile.

3. Home Screen - Programs and Events

WORKING UI

Figure 3. Featured programme cards and upcoming-event content in the Home dashboard.

• Programme cards include category, description, deadline and View Details action.	• Upcoming events use clear date blocks, titles, times and delivery format.
• Content is arranged in scan-friendly cards with consistent spacing.	• The layout remains readable across a wide browser viewport.

4. Home Screen - Announcement and Quick Links

WORKING UI

Figure 4. Recent announcement and quick-link sections near the bottom of the Home screen.

• Announcement card clearly identifies sample content and current limitations.	• Quick links provide direct access to Programs, Progress and Profile.
• Cards use consistent icons, labels, descriptions and navigation affordances.	• Bottom navigation remains available while the page is scrolled.

5. Program Listing - Search and Filters

Figure 5. Program catalogue with search input, category filters and reset control.

• Search input filters the local programme catalogue by title, category and description.	• Category chips support All, Mobile Development, Professional Skills, Data and Analytics, and Leadership.
• Reset restores the complete local catalogue.	• The result count updates to reflect the active search and category state.

6. Program Listing - Program Cards

WORKING UI

Figure 6. Responsive programme cards showing multiple sample categories and View Details actions.

• Cards include icon artwork, category, programme title, description and deadline.	• Each card exposes a clear View Details action.
• A responsive grid presents multiple cards on wide screens.	• Programme data is illustrative and is not a live offering.

7. Program Listing - Additional Content

WORKING UI

Figure 7. Additional programme card and lower portion of the catalogue screen.

• The Leadership sample demonstrates catalogue coverage beyond the first visible row.	• Card styling remains consistent across programme categories.
• Bottom navigation shows Programs as the active destination.	• The catalogue supports scrolling without losing primary navigation.

8. Program Details - Overview

WORKING UI

Figure 8. Program Details screen showing summary information and programme metadata.

• Selected programme data is displayed dynamically from the local catalogue.	• Summary area includes category, title, description and local-sample notice.
• Metadata cards show deadline, duration and delivery format.	• The About section provides a structured programme description.

9. Program Details - Eligibility and Actions

WORKING UI

Figure 9. Eligibility list, prototype-service notice and action controls.

• Eligibility requirements are presented as a clear checklist.	• An information banner states that live application and feedback services are not connected.
• Apply or Register and Give Feedback controls display honest prototype messages.	• The screen demonstrates the complete local programme-discovery flow.

Conclusion and Submission Checklist

Excelebrate Connect now satisfies the core Week 2 requirement of a working UI prototype with four interactive screens and navigation between them. The prototype translates the Week 1 wireframes into a cohesive Flutter interface while remaining transparent about the absence of live services and persistent data.

Final action	What to confirm before uploading
1. Save the project	Confirm all local files and screenshots are saved.
2. Commit Week 2 changes	Use a clear message such as: Implement Week 2 working UI prototype.
3. Push to GitHub	Verify the latest code, screenshots, README and Week 2 document appear on main.
4. Review repository	Open README links and confirm all screenshot images render correctly.
5. Upload this PDF	Submit this PDF through the Week 2 deliverable upload area before the deadline.

Project repository
